

**FORD & DOONAN**  
Air Conditioning Systems

## **CLEAN AIR PACK**

Congratulations on investing in Ford & Doonan's unique "Clean Air Pack".

The pack consists of a three part process to ensure the cleanest indoor air possible.

Now that you have the Clean Air Pack the following ongoing maintenance is required to keep the indoor air clean.

### **FILTERS**

The filters installed are the high efficiency type that are disposable not washable. Do not attempt to wash them or the cardboard frame will disintegrate. These filters have a typical life expectancy, in Domestic Applications, of twelve (12) months. At this point you will have to purchase new filters. These filters are available from Ford & Doonan or their replacement can be combined with your annual service. Advise the service receptionist when booking your annual service, that you have a Clean Air Pack and replacement filters are required.

Ignore the air conditioning controller's flashing "Clean Filter symbol" during the year. Simply reset it by pressing the appropriate button on the controller.

### **AERISGUARD TREATMENT**

Your indoor units evaporative coil has been treated with a residual, biodegradable anti-bacterial treatment. This treatment is required every twelve (12) months to ensure maximum protection. The treatment can only be applied by Ford & Doonan's in house Service Department. The application can be part of your annual service and, again advise the receptionist of this when booking your service, if you'd like it re-applied.
